Comprehensive Analysis of Cross-Border Cryptocurrency Remuneration, Taxation, and Statutory Liabilities

Executive Synthesis

The convergence of decentralized finance (DeFi) remuneration, cross-border jurisdictional tax treaties, and the stringent statutory requirements of Polish domestic tax law establishes a highly complex regulatory compliance environment. This report provides an exhaustive, expert-level forensic analysis of the fiscal and social security implications for a Polish tax resident receiving ongoing compensation in the form of USD Coin (USDC)—a fiat-collateralized stablecoin operating on the Polygon blockchain—from a United States-registered decentralized finance entity possessing no physical or legal establishment within the territory of the Republic of Poland.

The scope of this investigation bifurcates into two distinct chronological periods. The first period encompasses the fully concluded 2024 fiscal year, characterized by total revenues of 479,092.64 PLN, for which an annual tax declaration (PIT-37) was prepared and submitted by a third-party Polish tax firm. The second period covers the incipient 2025 fiscal year, specifically the months of January through April, during which the taxpayer received 40,500 USDC in bi-weekly tranches prior to the formal establishment of a registered sole proprietorship (Jednoosobowa Działalność Gospodarcza, hereinafter referred to as JDG).

An exhaustive evaluation of the provided documentation, cross-referenced against prevailing statutes of the Personal Income Tax (PIT) Act, the Social Insurance System Act, bilateral international treaties, and binding individual interpretations (interpretacje indywidualne) issued by the Director of the National Revenue Information (Krajowa Informacja Skarbowa - KIS), reveals systemic and critical vulnerabilities in the 2024 filing. The foundational strategy employed by the third-party tax firm demonstrates acute procedural errors regarding form selection, the evasion of mandatory international reporting protocols, the violation of statutory advance payment obligations, and potentially, a fundamental misclassification of the income's legal nature. Furthermore, the complete omission of social security (Zakład Ubezpieczeń Społecznych - ZUS) compliance represents a severe, unaddressed liability that eclipses the primary tax exposure.

For the 2025 pre-JDG period, the continuation of high-volume, continuous commercial activities without formal enterprise registration poses escalating risks of retroactive reclassification by the National Revenue Administration (Krajowa Administracja Skarbowa - KAS). This document systematically deconstructs these fiscal mechanisms, addresses the

precise interaction between progressive service income taxation and flat-rate cryptocurrency capital gains (PIT-38), and furnishes a definitive, legally anchored roadmap for executing a retroactive remediation (korekta) of the 2024 fiscal year while securing compliance for the 2025 transitionary phase.

Chapter I: Jurisdictional Framework and the Avoidance of Double Taxation

The foundational step in determining the tax obligations of an individual generating income across international borders is the application of the relevant bilateral tax treaty. In this scenario, the fiscal relationship is governed by the Convention between the Government of the United States of America and the Government of the Polish People's Republic for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Income, signed in Washington on October 8, 1974.[1]

1. Treaty Applicability to Decentralized Autonomous Organizations

While the paying entity is described as a decentralized finance (DeFi) company, international tax law scrutinizes the legal personhood and residency of the payer. Assuming the DeFi entity is formally incorporated or registered as a legal entity (e.g., an LLC, C-Corporation, or Foundation) within the United States, it qualifies as a US resident for treaty purposes. Consequently, the 1974 bilateral convention is fully activated, superseding domestic tax law wherever a conflict arises.

2. Allocation of Taxing Rights

The classification of the taxpayer's activities dictates which article of the treaty applies. If the taxpayer is deemed to be providing freelance or independent contractor services, the income falls under the purview of "Independent Personal Services" or, following modern OECD Model Tax Convention updates integrated into bilateral understandings, "Business Profits".[2]

Under the provisions of the US-Poland treaty, income derived by a resident of Poland from the performance of independent personal services or business operations is taxable exclusively in Poland, provided that the resident does not maintain a "fixed base" or a "permanent establishment" (zakład) in the United States.[3] Because the taxpayer executes all software development activities remotely from within the borders of Poland, utilizing their own equipment and infrastructure, no US permanent establishment is created.

Therefore, the Republic of Poland retains the absolute and exclusive right to tax this income. The United States lacks the jurisdictional authority to levy federal income tax on this specific stream of active service revenue. As a practical consequence, the US entity should not have withheld any US federal taxes (a status typically formalized via the submission of an IRS Form W-8BEN by the Polish resident). Because there is no foreign tax paid to the IRS, the mechanisms of double taxation avoidance—specifically the "proportional deduction" (odliczenie proporcjonalne) or "exemption with progression" (wyłączenie z progresją)

methods—do not result in any tax offset against the Polish liability.[6]

3. The Mandatory Nature of the PIT/ZG Annex

Despite the fact that no foreign tax was withheld and no mathematical offset is available, the procedural obligation to declare the foreign origin of the income remains absolute. The Polish tax system requires transparency regarding the geographic sourcing of wealth.

Taxpayers subject to unlimited tax liability in Poland (Polish tax residents) who achieve income from sources outside the territory of the Republic of Poland must unconditionally append the **PIT/ZG** (Information on the amount of income/loss from abroad) annex to their primary annual tax return.[6] The geographic source of the income is legally tethered to the residency of the paying entity (the United States), irrespective of the fact that the remuneration was transmitted via a decentralized blockchain network (Polygon) operating outside traditional territorial jurisdictions. By failing to attach the PIT/ZG document, the 2024 filing executed by the third-party tax firm actively conceals the cross-border nature of the revenue from the Polish tax administration, constituting a material disclosure violation.

Chapter II: Forensic Deconstruction of the 2024 Tax Filing

The 2024 tax declaration, submitted on behalf of the taxpayer, classified 479,092.64 PLN as income derived from personal services contracts ("umowa zlecenie" under Article 13 of the PIT Act) and utilized the PIT-37 declarative form.[9] An exhaustive audit of this submission against the Polish fiscal code reveals profound structural deficiencies.

1. The Fallacy of the PIT-37 Form Selection

The selection of the PIT-37 form represents a fundamental procedural impossibility given the objective facts of the engagement. The architecture of the Polish tax reporting system strictly segregates taxpayers based on the presence or absence of a domestic "tax remitter" (płatnik). The PIT-37 declaration is exclusively reserved for taxpayers who derive their income entirely through the intermediation of Polish remitters.[10]

In domestic scenarios, a remitter (such as a Polish employer or a Polish limited liability company contracting a freelancer) is statutorily obligated to calculate the income, apply statutory deductions, withhold the appropriate advance tax (zaliczka), transfer these funds to the tax office, and subsequently issue an individualized informational document—typically a PIT-11, PIT-11A, or PIT-40A—to both the taxpayer and the government.[6] The PIT-37 is essentially a reconciliation form that aggregates the data from these pre-existing PIT-11 documents.

The payer in this instance is a US-registered DeFi company operating entirely outside the jurisdiction of the Polish Personal Income Tax Act. Consequently, the foreign entity possesses no legal mechanism, capacity, nor obligation to act as a Polish tax remitter.[12] They did not, and legally could not, issue a Polish PIT-11. Furthermore, they did not issue an IFT-1R, as this specific document is strictly utilized by Polish entities detailing payments made to non-residents, which

is the inverse of the present scenario.

When a PIT-37 is digitally submitted to the National Revenue Administration's automated systems (e-Urzędy Skarbowe), the algorithmic validation instantly attempts to reconcile the declared 479,092.64 PLN against the centralized database of submitted PIT-11s. Because no corresponding PIT-11 exists from the US entity, the system will irrevocably flag the PIT-37 as an anomalous and unsupported filing.

The Correct Statutory Mechanism: The taxpayer was inherently subject to the self-assessment and self-reporting regime. Income obtained from foreign sources without the intermediation of a Polish tax remitter must, without exception, be declared on the **PIT-36** form.[6] The failure of the tax preparation firm to utilize the PIT-36 demonstrates a severe deficiency in understanding the mechanics of cross-border taxation.

2. The Advance Tax Payment Default (Article 44 ust. 1a)

A review of the filed PIT-37 indicates that zero advance tax payments (zaliczki) were remitted during the 2024 calendar year, with the entirety of the 95,048 PLN tax liability settled as a lump sum at the time of the annual filing. This methodology constitutes a direct and systemic violation of Article 44 of the Personal Income Tax Act.

Under Article 44 ust. 1a, taxpayers who achieve income without the intermediation of a remitter—which explicitly includes income from foreign employment or foreign civil-law contracts delineated in Article 13—are legally mandated to self-calculate and remit monthly advance tax payments directly to their individual tax micro-account.[13]

Mechanics of the Statutory Obligation: The taxpayer was required to independently execute the following sequence by the 20th day of every month following a month in which USDC was received [12]:

1. Establish the precise PLN equivalent of the USDC received based on the National Bank of Poland (NBP) average exchange rate from the preceding business day.
2. Deduct the applicable costs of obtaining income (koszty uzyskania przychodu).
3. Apply the relevant progressive tax scale (12% for the base up to 120,000 PLN, shifting to 32% for the surplus).
4. Deduct the proportional monthly tax-free allowance (kwota zmniejszająca podatek).[15]
5. Transfer the calculated funds to the tax office.

Consequences of Systemic Non-Compliance:

The Polish fiscal framework does not permit taxpayers to act as uncompensated, temporary depositories of state revenue. By deferring the entire tax liability to the annual filing deadline, the taxpayer generated eleven months of rolling, compounding tax arrears.

Crucially, remitting the principal sum of 95,048 PLN at the time of filing merely halts the accrual of future interest; it does not extinguish the historical interest (odsetki za zwłokę) generated by defaulting on the monthly deadlines throughout 2024.[15] The statutory interest rate for tax arrears in Poland is punitive. The KAS automated systems will inevitably calculate the precise

interest owed from the 20th of each respective month in 2024 until the date the final lump sum was deposited, resulting in the issuance of an administrative demand for penalty interest.

2024 Tax Compliance Gap Analysis: Filed vs. Corrected State

TAX PARAMETER	AS FILED (BY TAX FIRM)	COMPLIANT REQUIREMENT (Legal Standard)	RISK SEVERITY
Tax Form	✕ PIT-37	**PIT-36**	⚠ Critical Breach
Foreign Annex	✕ None Omitted	**PIT/ZG** Required for reporting foreign-sourced income	⚠ Compliance Failure
Advance Payments (Zaliczki)	✕ Zero (None paid)	**Monthly Self-Remittance** Due by the 20th day of the following month	⚠ Financial Penalty Risk

The matrix details the critical procedural and statutory deviations in the 2024 PIT-37 filing. The omission of PIT-36, PIT/ZG, and monthly advance payments represent definitive compliance breaches that require immediate remediation via a formal correction (korekta).

Chapter III: Income Classification and the 20% Deduction Paradox

The most strategically delicate aspect of the 2024 filing is the substantive classification of the income. The tax firm categorized the revenue under Article 13 point 8 of the PIT Act, which governs income from activities performed personally, commonly referred to as civil-law mandate contracts (umowa zlecenie).[9]

1. The Lure of the 20% Statutory Deduction

The primary motivation for selecting the Article 13 classification is highly transparent: it grants the taxpayer access to a statutory, flat-rate deduction for the "costs of obtaining income" (koszty uzyskania przychodu) equal to 20% of the gross revenue, minus applicable social

security contributions.[17]

For a software developer whose actual physical overhead (computer hardware, internet access, software licenses) is negligible, applying a fictional 20% deduction to a 479,092 PLN gross income yields a massive artificial expense of 95,818 PLN. This effectively shields nearly a fifth of the taxpayer's income from the progressive tax brackets. The mathematical appeal of this classification is undeniable, yet its legal tenability in the context of an ongoing, high-volume foreign B2B relationship is highly precarious.

2. The Threat of Reclassification to Business Activity (Art. 5a)

While Polish civil law recognizes verbal and implied contracts, utilizing Article 13 for a continuous, full-time engagement with a single commercial entity exposes the taxpayer to severe reclassification risks.

Article 5a point 6 of the Personal Income Tax Act establishes a rigid definition of non-agricultural business activity (działalność gospodarcza). The statute defines business activity as an enterprise that is:

1. Undertaken in an organized manner.
2. Continuous in nature.
3. Conducted for the purpose of generating profit.
4. Conducted in the taxpayer's own name and on their own account.

Generating nearly half a million PLN over a contiguous twelve-month period, performing specialized software development for a decentralized finance protocol, overwhelmingly exhibits the hallmarks of an organized, continuous business enterprise rather than an episodic, personal civil-law mandate.[16]

If the National Revenue Administration (KAS) initiates an audit and determines that this activity objectively constituted an unregistered, *de facto* business, the fiscal consequences would be catastrophic. Reclassifying the income from Article 13 (personal services) to Article 14 (business income) nullifies the 20% flat-rate deduction. A taxpayer conducting business operations on general rules can only deduct *actual, strictly documented, out-of-pocket expenses* that are directly linked to revenue generation.[18]

Consequently, the removal of the 95,818 PLN artificial deduction would instantly expand the tax base. This newly exposed income would be thrust entirely into the highest 32% progressive tax bracket, resulting in a retroactive tax assessment of approximately 30,000 PLN in additional principal, plus severe statutory interest, and potential penal-fiscal (KKS) sanctions for operating a commercial enterprise without mandatory registration in the Central Register and Information on Economic Activity (CEIDG).

3. Alternative Classifications: The Catch-All Category

An alternative argument occasionally utilized in niche crypto scenarios is classifying the revenue under "Other Sources" (inne źródła) via Article 20 of the PIT Act. While this avoids the stringent definitions of business activity, it is a residual category meant for episodic, undefined

financial gains. Sustained bi-weekly payments of 6,000 USDC strictly for software engineering services possess a clear, defined economic character that makes the "Other Sources" classification highly vulnerable to immediate challenge by tax authorities. The activity is definitively either a mandate contract or a business enterprise.

Chapter IV: The Statutory Hazard of Cross-Border Social Insurance (ZUS)

While the income tax compliance issues are complex, the most severe, systemic, and unaddressed liability spanning both the 2024 and early 2025 periods is rooted in mandatory social security contributions (Zakład Ubezpieczeń Społecznych - ZUS). It appears the hired tax firm entirely ignored the social insurance implications of their chosen tax strategy.

1. The Fiction of the ZUS-Free Foreign Contract

A pervasive and dangerous misconception within the remote contracting ecosystem is that executing a contract with a foreign entity automatically exempts a Polish resident from domestic social security obligations. This assertion is categorically false and legally baseless.

The Polish social security system is governed by a strict principle of territoriality.[19] If a tax resident of Poland performs work physically located within the territory of the Republic of Poland, that labor generates a mandatory title for social insurance coverage, utterly regardless of where the paying entity is headquartered, incorporated, or financially domiciled.[20]

When the tax firm filed the PIT-37 explicitly classifying the income as an *umowa zlecenie* (civil-law mandate contract), they legally formalized the taxpayer's status as a "zleceniobiorca" (contractor). Under Polish law, an *umowa zlecenie* mandates full social security contributions—encompassing retirement (emerytalne), disability (rentowe), accident (wypadkowe), and health (zdrowotne) insurance—from the very first Polish Zloty earned.

2. The "Płatnik Zagraniczny" (Foreign Remitter) Mechanism

In a standard domestic arrangement, a Polish employer calculates the ZUS burden, deducts the employee's portion from the gross pay, adds the employer's proprietary portion, and remits the total sum to the state. However, a United States-based DeFi company without a registered branch or representative office in Poland cannot interface with the ZUS teleinformatics system.

To resolve this jurisdictional friction, Polish law employs the "Płatnik Zagraniczny" mechanism. When a foreign entity without a domestic presence engages a Polish resident under an employment or mandate contract, the statutory obligation to calculate, report, and remit all ZUS contributions **shifts entirely and unconditionally to the Polish resident**.[12]

To comply, the taxpayer was legally required to execute the following administrative burden:

1. Conceptually register the foreign entity, or register themselves as the "payer of contributions" acting legally on behalf of the foreign entity, utilizing administrative forms such as ZUS ZPA/ZFA and ZUS ZUA.[21]

2. Assume the total financial burden of **both** the employee's deductibles and the employer's matching contributions out of their gross USDC remuneration.[12]
3. Submit comprehensive monthly declarative forms (ZUS DRA) and transfer approximately 30% of their gross monthly income to the social security administration.

3. The Cross-Referencing Audit Threat

By formalizing the PIT-37 with nearly half a million PLN coded specifically as *umowa zlecenie* income, the taxpayer has effectively broadcast to the state apparatus that they engaged in a high-value mandate contract. The National Revenue Administration (KAS) and the Social Insurance Institution (ZUS) operate highly integrated data-sharing protocols.

When algorithmic oversight detects a massive *umowa zlecenie* declared to the tax office without a corresponding, parallel stream of social security contributions registered in the ZUS database, the generation of an audit flag is highly probable. The financial penalties for unpaid ZUS contributions include the immediate demand for the principal amount (which would exceed 140,000 PLN for 2024 alone), compounded statutory interest for late payment, and potential administrative fines.

4. The Irreconcilable Dilemma

The taxpayer is currently trapped in a profound regulatory paradox engineered by the tax firm's original filing.

If the taxpayer maintains the defense of the tax firm's chosen classification (Umowa Zlecenie) to preserve the lucrative 20% cost deduction, they simultaneously admit to a devastating retroactive ZUS liability. Conversely, if the taxpayer attempts to retroactively classify the 2024 income as an unregistered business activity (Działalność Gospodarcza) to escape the mandate contract ZUS rules, they intentionally trigger the destruction of the 20% flat-rate tax deduction, resulting in a massive income tax deficit, while simultaneously admitting to the penal-fiscal offense of operating a shadow enterprise. Resolving this paradox requires highly specialized legal intervention.

Chapter V: The Legal Mechanics of Cryptocurrency (USDC) Remuneration

A central complexity driving this inquiry is the medium of exchange: USD Coin (USDC). The taxpayer highlights a regulatory precedent established by the Swedish tax authority (Skatteverket), which ruled that receiving USDC as salary constitutes standard salary income at the precise time of receipt, rather than an isolated cryptocurrency capital event. A meticulous review of Polish tax jurisprudence reveals a paradigm that aligns remarkably closely with the Swedish precedent, albeit utilizing different internal statutory mechanisms.

1. Classification of Stablecoin Salary at Receipt

Under Polish tax doctrine, the fact that remuneration is delivered via a cryptographic token on a

decentralized blockchain does not mutate the fundamental economic reality of the transaction, nor does it exempt the transfer from standard income tax categorizations.[9] When an individual exerts labor, writes software code, and receives compensation in exchange, it is the *nature of the labor performed* that dictates the tax classification, not the *medium of exchange* utilized to deliver the value.

According to a vast and consistent body of individual interpretations issued by the Director of the National Revenue Information (KIS)—including recent, binding rulings—payment rendered in cryptocurrency constitutes a "benefit in kind" (świadczenie w naturze) or the fulfillment of a financial obligation via a virtual asset.[16]

The Instantiation of the Taxable Event: The taxable event does not occur when the taxpayer eventually cashes out the USDC for fiat currency on a centralized exchange. The taxable event is instantiated at the exact cryptographic moment the USDC is transferred to the taxpayer's private wallet (e.g., MetaMask, Ledger) or becomes available for their unrestricted disposal on a platform.[9] It is at this precise microsecond that the economic benefit is deemed "obtained" (przychód) under Polish law.

The Valuation Imperative: Because all Polish tax liabilities must be calculated and settled in Polish Zloty (PLN), the foreign-denominated or virtual asset must undergo a fiat translation. The Director of KIS explicitly mandates that the value of cryptocurrency received as remuneration for services must be determined based on the open market price of that specific cryptocurrency on the day *preceding* the receipt of the payment.[22]

Because USDC is a stablecoin algorithmically and financially pegged to the United States Dollar, the valuation process is straightforward. The taxpayer must establish the USD value of the USDC (which is legally recognized as 1:1) and subsequently apply the **average exchange rate published by the National Bank of Poland (NBP) for the US Dollar from the last business day immediately preceding the day the USDC was deposited into the wallet**.[11]

Therefore, the taxpayer's understanding of the Swedish model is fundamentally correct and entirely applicable within the Polish jurisdiction: receiving USDC is an immediate income tax event, subject to the progressive tax scales (12% and 32%), mathematically identical to receiving a wire transfer of traditional fiat USD or EUR into a regulated banking institution.[24]

2. The Intersection with Crypto Capital Gains (PIT-38)

A critical error of omission in the 2024 filing—and a vital strategic consideration for the 2025 exchange conversions—is the sophisticated interaction between the initial service income event and the subsequent capital gains treatment of the cryptocurrency.

Under Article 17 paragraph 1 point 11 of the Personal Income Tax Act, revenues derived from the "onerous disposal of virtual currencies" (odpłatne zbycie waluty wirtualnej)—such as executing a trade of USDC for EUR or PLN on commercial exchanges like Binance or Kraken—constitute revenue from money capitals (kapitały pieniężne). This specific class of revenue is isolated from standard income and is taxed at a flat 19% rate, mandating declaration on a separate **PIT-38** form.[25]

A superficial reading of the law suggests a double taxation nightmare: taxing the USDC at up to 32% upon receipt, and then taxing the identical USDC at 19% upon sale. However, Polish tax architecture prevents this confiscatory outcome through the vital mechanism of "costs of obtaining income" (Koszty Uzyskania Przychodu - KUP) specifically tailored for virtual currencies.

The Mechanism of Cost Basis Neutralization: When a taxpayer receives cryptocurrency as taxable remuneration for services, the precise PLN value of that cryptocurrency—which was just mandatorily declared as revenue on the PIT-36/37 and subjected to the progressive income tax—metamorphoses into the legally recognized acquisition cost (cost basis) of that virtual asset.[23]

To illustrate this mechanism with absolute clarity, consider the chronological lifecycle of a single payment tranche, which demonstrates exactly how the cost basis is established and carried forward, providing absolute clarity on why a PIT-36 and a PIT-38 are both necessary but do not result in double taxation.

Stage of Transaction	Action Taken	Legal Classification	Valuation & Tax Impact	Relevant Tax Form
1. Receipt of Asset	Taxpayer receives 6,000 USDC for software services.	Income from Services (Art. 13 or Art. 14)	Assuming NBP rate is 4.00 PLN/USD. **Revenue: 24,000 PLN**. Taxed at 12% or 32%.	**PIT-36**
2. Establishment of Basis	Taxpayer holds 6,000 USDC in a private wallet.	Virtual Currency Holding	The value taxed as income immediately becomes the deductible acquisition cost. **Cost Basis: 24,000 PLN**.	N/A
3. Conversion	Taxpayer sells 6,000 USDC for	Onerous Disposal of	Assuming minor FX fluctuation,	**PIT-38**

to Fiat	EUR on an exchange.	Virtual Currency	sale yields 24,100 PLN. Calculation: 24,100 (Revenue) - 24,000 (Cost Basis) = **100 PLN Tax Base**. Taxed at flat 19%.	

The accuracy of the hypothesis presented in the original inquiry (Question 21) is confirmed. The conversion of USDC to EUR on an exchange is an inescapable taxable event, but it is effectively tax-neutral because the highly elevated cost basis shields the vast majority of the principal from the 19% capital gains levy.[27]

However, **this neutralization of liability does not absolve the taxpayer from the strict reporting requirement.** The taxpayer is absolutely obligated to file an annual PIT-38 detailing the gross revenue from the crypto exchange sale juxtaposed against the corresponding high acquisition costs.[29] The failure of the tax firm to file a PIT-38 in 2024 (assuming any portion of the USDC was sold to fiat during the 2024 calendar year) represents a discrete compliance failure that must be rectified.

Chapter VI: Strategic Classification of Pre-JDG 2025 Income

In the initial quadrant of 2025, prior to the formalization of the sole proprietorship (JDG), the taxpayer received an aggregate of 40,500 USDC (approximately 160,000 to 165,000 PLN) distributed across seven strict bi-weekly tranches. Following April, the taxpayer established a JDG operating under the 12% flat-rate tax (Ryczałt) and commenced invoicing in traditional EUR fiat. The fiscal treatment of this transitionary period requires meticulous execution to avoid contaminating the newly compliant JDG structure.

1. The Impossibility of Retroactive JDG Incorporation

A foundational tenet of Polish commercial and tax law is that business income (przychody z działalności gospodarczej) strictly requires formal antecedent registration in the Central Register and Information on Economic Activity (CEIDG). The legal framework prohibits taxpayers from retroactively sweeping income earned *before* the formal date of JDG establishment into the JDG's protective tax perimeter to exploit highly favorable regimes, such as the 12% Ryczałt.[30]

The Act on Flat-rate Income Tax explicitly requires a formal, timely notification to the

competent head of the tax office regarding the election of this specific taxation form. Income generated prior to the legal existence of the JDG, and prior to the submission of this election notification, cannot under any circumstances be subjected to the 12% flat rate.[31]

2. Classification and Reporting of the Early 2025 Tranches

Consequently, the 40,500 USDC received between January 2nd and April 1st, 2025, must remain segregated as personal income. This tranche of revenue must be reported on the standard annual **PIT-36** for the 2025 fiscal year (which will be due by April 30, 2026), entirely separate from the JDG's accounting.

The rhythmic, bi-weekly cadence of the payments (exactly 6,000 USDC arriving every fourteen days from a single commercial client) serves to heavily reinforce the objective character of continuous, organized commercial activity. Furthermore, because this income wildly exceeds the statutory monthly limits for allowable "unregistered business activity" (działalność nierejestrowana—which is strictly capped at 75% of the national minimum wage per month), the operations legally constituted an active, albeit unlawfully unregistered, business enterprise.

For the 2025 PIT-36 filing, the taxpayer faces the identical, irreconcilable dilemma encountered in 2024:

- Declare the income as an *umowa zlecenie* (Art. 13) to utilize the 20% cost deduction, thereby immediately triggering the personal obligation to calculate and remit massive retroactive ZUS contributions on the 160,000 PLN base.
- Declare the income under *inne źródła* (Other sources, Art. 20) as a chaotic catch-all. However, the sheer volume, predictability, and professional nature of the software engineering work make this classification highly susceptible to immediate rejection by KIS during an audit.

3. The Actionable Imperative for 2025 Advance Payments

Regardless of the final classification chosen, the paramount, immediate statutory duty for 2025 is the cessation of compounding tax arrears. Even though the JDG is now formally established, the taxpayer remains individually liable for the unpaid advance taxes on the January through April personal income.

The taxpayer *must* immediately calculate the 12% progressive tax base for the 40,500 USDC (utilizing the NBP day-prior valuation method) and remit these delayed advance payments (zaliczki) to their individual tax micro-account. Crucially, because these payments are already months overdue, the remittance must be accompanied by a formal letter of active repentance (czynny żal) submitted to the tax office, confessing the delay to preempt penal-fiscal consequences.

Chapter VII: Comprehensive Remediation and Compliance Blueprint

The forensic evidence overwhelmingly dictates that the third-party tax company made critical

procedural, substantive, and strategic errors in the execution of the 2024 filing. The utilization of the PIT-37 form without the existence of a Polish remitter, the complete omission of mandatory advance payment calculations, the failure to append the PIT/ZG cross-border disclosure annex, and the apparent, total disregard for the devastating ZUS liabilities inherent in an *umowa zlecenie* classification demonstrate a profound lack of specialized competency in the niche domain of cross-border cryptocurrency remuneration.

To secure the taxpayer's fiscal safety and neutralize the threat of KAS and ZUS audits, the following multiphase remediation roadmap must be executed with precision.

Phase 1: The 2024 Tax Correction (Korekta) Protocol

1. **Overriding the PIT-37 via PIT-36 Korekta:** The erroneously filed PIT-37 must be entirely legally superseded by filing a formal correction (korekta) utilizing the statutorily mandated PIT-36 form.[11]
2. **Integration of the PIT/ZG Annex:** The corrected PIT-36 must seamlessly incorporate the PIT/ZG annex, explicitly detailing the United States as the sovereign country of origin for the entirety of the income, fulfilling international transparency mandates.[6]
3. **Advance Tax Reconciliation Mapping:** The correction documentation must formally map out the historical advance taxes that statutorily *should* have been remitted under Article 44 ust. 1a for each individual month of the 2024 calendar year.[13]
4. **Submission of Czynny Żal (Active Repentance):** Synchronously with the submission of the korekta, the taxpayer must submit a formal *czynny żal* to the head of the Trzeci Urząd Skarbowy Warszawa-Śródmieście. This legal document must confess to the failure to execute monthly advance payments in 2024, strategically attributing the systemic error to the reliance on improper professional advice provided by the hired tax firm. This mechanism is critical for shielding the taxpayer from severe fines under the Penal Fiscal Code (Kodeks karny skarbowy).
5. **Liquidation of Default Interest:** The tax administration will algorithmically calculate the statutory interest on the late advance payments. The taxpayer must recognize that the 95,048 PLN paid at the time of the original filing does not negate this historical interest debt. The taxpayer must hold sufficient liquidity to pay this accrued interest immediately upon receiving the administrative assessment.

Phase 2: Rectification of 2024 Crypto Capital Gains (PIT-38)

1. **Forensic Audit of 2024 Blockchain Transactions:** A complete, immutable trace of all USDC received and disposed of during the 2024 calendar year must be conducted.
2. **Filing the Overdue PIT-38:** If *any* fraction of the 2024 USDC was converted to EUR, PLN, or swapped for another virtual currency (e.g., Ethereum or Bitcoin) during 2024, a PIT-38 must be filed immediately. The revenue declared will be the exact fiat value at the cryptographic moment of the swap/sale, and the deductible cost (KUP) will be the precise PLN value previously declared as service income on the PIT-36 at the moment of initial receipt.[24] This ensures the mathematically sound neutralization of the capital gains tax.

Phase 3: ZUS Liability Mitigation Strategy

This represents the most legally perilous and financially threatening aspect of the taxpayer's situation. The taxpayer must immediately retain the services of a specialized social security attorney (radca prawny specializing in ZUS) to determine the least damaging trajectory:

- **Path A (Strict Compliance via Płatnik Zagraniczny):** The taxpayer retroactively registers as a proxy payer for the foreign entity, submits overdue ZUS DRA declarative forms for the entirety of 2024, and liquidates the massive backlog of contributions (amounting to roughly 30% of the 479,000 PLN gross). While financially devastating, this path is strictly legally compliant with the existing *umowa zlecenie* classification and eliminates the threat of unannounced audits.
- **Path B (Aggressive Reclassification Defense):** The taxpayer attempts to argue that the work was actually unregistered business activity or an unclassified property right transfer, challenging the foundational ZUS obligation entirely. This path directly contradicts the submitted tax return and carries an immense, existential risk of tax reclassification. It effectively trades a known ZUS liability for a potentially massive, compounded tax liability by threatening the 20% statutory deduction.

Phase 4: Execution of 2025 Compliance

1. **Immediate Remediation of Pre-JDG Advance Payments:** For the 40,500 USDC received between January 2nd and April 1st, 2025, the taxpayer must calculate the 12% progressive tax base immediately. These delayed advance payments must be remitted to the tax micro-account forthwith to arrest further interest accrual, accompanied by a fresh *czynny żal* for the 2025 delays.
2. **Ironclad Pre-JDG Record Keeping:** The taxpayer must maintain strict, auditable segregation between the pre-JDG USDC payment tranches and the post-JDG EUR invoices. The early USDC payments will be processed on the standard progressive scale PIT-36 for 2025. Conversely, the post-JDG EUR invoices will be processed strictly on the PIT-28 form, benefiting from the 12% Ryczałt.[31]
3. **Proactive 2025 PIT-38 Preparation:** Because USDC was actively converted to EUR on commercial exchanges (Binance, Kraken) in 2025, the taxpayer must meticulously document the exact PLN value of the USDC on the day it was received (to establish the high cost basis) and the precise PLN value on the day it was executed on the exchange. This granular documentation will ensure the PIT-38 filed in April 2026 demonstrates zero or negligible capital gains tax liability, executing the cost-basis neutralization strategy with absolute precision.

By systematically addressing the structural flaws of the original PIT-37, embracing the mandatory PIT-36 self-assessment regime, and ruthlessly leveraging the established cost-basis mechanism for stablecoin conversions, the taxpayer can successfully transition this highly vulnerable and exposed compliance profile into a defensible, legally anchored fiscal position

capable of withstanding state scrutiny.
